READLR

The Reading Chronicles

Ten-book curriculum and system blueprint

Group review edition 1.1 | 17 October 2026

Learning Camp, curriculum progression, games, reading evidence, proposal changes and evaluation goals.

DESIGN STATUS

Proposed structure based on the supplied English KS1 materials. Book 1 is partially implemented; this document does not claim that all ten books or assessments are complete.

Contents

Group review blueprint 3

Group review blueprint

Version: Proposed curriculum and system refactor, 17 October 2026.

Revision 1.1: Explicit spoken-reading requirements added for Books 1-10. Section 4A specifies the required teaching cycle, per-book speaking tasks, game reactions, assessment records and release criteria. These are implementation requirements, not claims that the features are already complete.

Purpose: Agree on what Readlr teaches, how the ten books deliver it, what the games demonstrate, and what must change in the software proposal before further implementation.

Status: This is a design specification, not a claim that all ten books or their assessments are implemented. Book 1 has a partial working foundation. The later books have an existing shell and activities, but not the complete sequences specified here. No new gameplay is implemented by this document.

Central decision: Keep the imaginative reading world, Learning Camp, Milo, and interactive books. Replace the old three-stage vowel -> blending -> CVC curriculum architecture with a cumulative ten-book adaptation of the supplied **English KS1 Tutor's Guide and Learner's Workbook**. Preserve the teaching sequence, not necessarily the worksheet's visual format.

Important boundary: Ten books are Readlr's organization of the supplied material, not ten officially prescribed DepEd stages. Whole-curriculum coverage means supporting every identified learning domain through app activities **and explicit tutor/partner/paper activities**. It does not mean that a speech API can automatically teach or assess everything.

1. Source basis and interpretation

Source	What it establishes	What it does not establish
Supplied KS1 English Tutor's Guide, PDF pp. 3-4 / printed pp. 1-2	Eight-week sequence, cumulative sound introductions, review and check-ins	Ten official books, app mastery thresholds, an approved Readlr intervention
Tutor's Guide, PDF p. 6 and teaching lessons	Readiness, emotional safety, modeling, guided and independent work, tutor support	A fully unsupervised replacement for instruction
Tutor's Guide, PDF pp. 49-54 / printed pp. 47-52	Later phrase work, Magic E, sentence work, check-in domains	Whole-word ASR as a valid phoneme or comprehension score
Learner's Workbook, LAS 1-46	Listening, sound-symbol work, writing, building, reading, phrases, sentences and meaning	That completing a digital imitation of a worksheet proves reading mastery
Version 6 Software Proposal, PDF pp. 2-4, 6, 8-9	Original objectives, targets, three-stage design, study scope	Evidence that the targets have been attained
MVP Validation Highlights, PDF pp. 2-3	Qualitative learner, researcher and facilitator feedback	Quantitative learning gains, longitudinal retention, or completed formal expert evaluation

The source filenames are listed at the end. Read this alongside ARAL_OBJECTIVES_AUDIT_2026-10-17.md for the earlier implementation critique. This blueprint refines that audit: Book 8 includes LAS 41, and Magic E includes the guide's **Pete** example as well as a/i/o/u examples.

ARAL and Marungko: describe the relationship accurately

The supplied course is English. Its sequence starts **m, a, t**, then **e, s, i, l**; it must not be replaced with a different-language letter sequence just to retain the proposal's earlier terminology.

Use sound-first instruction, cumulative combinations, concrete anchors, explicit modeling, and gradual independent reading as the design principles. Marungko can inform the project's pedagogical discussion, but an English implementation is not automatically a complete Filipino Marungko implementation. DepEd's Learning Portal describes Marungko resources that progress from sounds to syllables and words; the actual language inventory and sequence still matter. DepEd Marungko resource

Recommended project description: **Readlr is a gamified, ARAL-informed English KS1 reading companion for Grade 1 learners, supporting tutor-guided and increasingly independent practice.** The official ARAL guidance describes structured phonics-based KS1 support; it does not certify this application's design. DepEd Memorandum 064, s. 2025

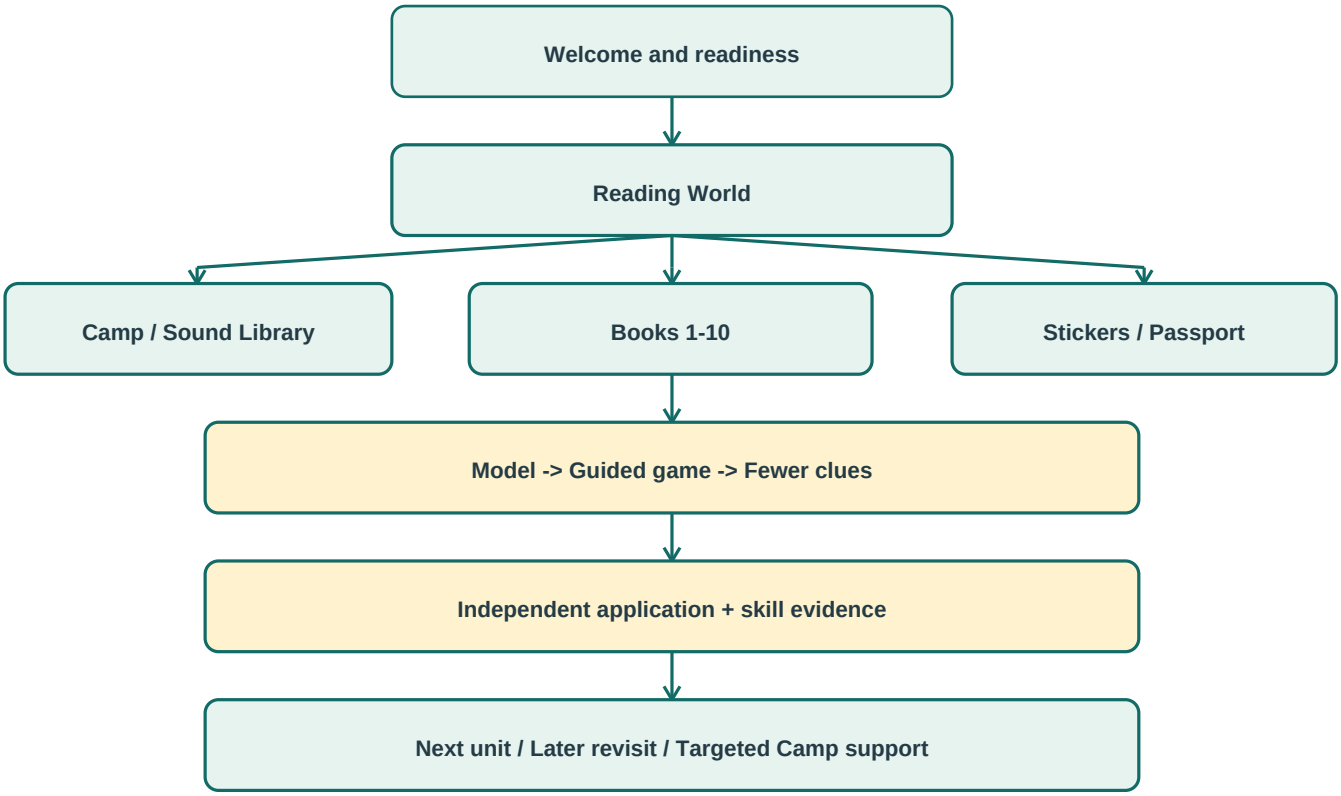

If Filipino remains part of the research scope, create a separately mapped language track with its own materials, recordings and assessment. Do not mix English long-vowel rules into Filipino instruction.

2. Names and system architecture

Name	Formal meaning	Child-facing purpose
Reading World	Main navigation hub	Return to the current book, Camp, library or rewards
Learning Camp	Reusable practice and readiness area	Get ready, practise a tricky skill, or revisit a familiar activity
Reading Chronicles	The complete ten-book learning campaign	Travel through ten connected reading adventures
Book / Chronicle	A cumulative curriculum unit	Learn and apply a related group of reading skills
Trail	A sequence of related lesson stops within a book	Follow the illustrated route through a small learning goal
Page / Spread	A presentation container, not a curriculum level	See a manageable section of a trail
Quest / Activity	One teaching or practice task	Listen, move, build, read or explain something
Final Gate	Readlr's independent application checkpoint	Show what can be done without the model answer
Tutor Check-in	The supplied guide's educator-administered assessment	Read with the tutor at scheduled points
Reading Passport	Skill evidence and progress view	See skills practised and skills demonstrated
Sticker Book	Effort, participation and cosmetic rewards	Collect and personalize without confusing rewards with mastery
Sound Library	Curriculum-linked recordings and examples	Revisit sounds and words from lessons
Discovery Realm	Future transfer and extension area	Use acquired reading skills in new adventures

Answer to 'are the books stages?': They are ordered learning units, so they form progression. In the specification, call them **Books / Curriculum Units**, not the old Stage 1 Vowels, Stage 2 Blending, Stage 3 CVC. A book can span multiple sessions; a session can revisit an earlier book. A book is not automatically one week.

Prefer one term per concept in code and reports: book, trail, activity, checkpoint, skillEvidence. Reserve stage for a step inside an activity, such as listen/build/read, or migrate old identifiers with explicit compatibility handling.

Tutor oversight and scheduled check-ins support the whole journey.

No separate child-facing Review navigation is required. Retrieval practice appears naturally in the next trail, Camp recommendations and later adventures.

3. Learning Camp: what stays and what changes

Camp is **not a prerequisite marathon** that requires mastery of all vowels before Book 1. It provides readiness, focused support, and cumulative practice linked to the learner's current book.

Camp location	Purpose and activities	Availability and evidence
Welcome Clearing	Listening routines, feelings check, book handling/print direction, microphone/headphone rehearsal, tap/drag practice	Before Book 1 and revisit anytime; readiness observations, not a reading score
Valley of Vowels: Vowel Dojo	Hear/identify currently taught vowel sounds, mouth cues, sound location, picture-word contrasts	Short a with Book 1; e/i with Book 2; o with Book 4; u with Book 5; Magic E practice with Book 9
Consonant Grove	Sound-letter association, upper/lowercase pairing, continuous versus stop-sound practice	Follow the guide's introduction order; no universal 'long/short consonant' categories
Blending Bridge	Oral blending, counters, sound-to-letter mapping, synchronized tile merging, segmentation	Start with am/at/mat; expand cumulatively rather than waiting for every vowel
Word Workshop	Dictation, letter changes, word-picture meaning, spelling with tiles, paper/journal companion	Models on first, then faded; copying and independent encoding recorded differently
Story Circle	Phrase reading, sentence construction, partner reading, simple questions, drawing/writing	Add as those demands appear in Books 5-10; narrative listening available earlier

Keep the familiar Dojo and Bridge visual identity. Add curriculum filtering, not an unrelated replacement. The default recommendation uses taught content and the current support need. A tutor may preview later content; preview must not create mastery evidence. Camp always allows revisiting previous learning without losing progress.

Each Camp activity has a visible route back to its originating book and page. Sound Library uses the same content IDs and audio as Camp and books. Do not maintain three inconsistent word lists.

4. The learning contract inside every book

1. **Remember:** A brief retrieval task from earlier learning. No new controls and new phonics rule at the same time.

2. **Meet:** Milo models the target with reviewed audio, meaningful imagery and clear print. Explain unfamiliar vocabulary orally.

3. **Try together:** The learner moves, sorts, builds or speaks with support. Feedback explains the sound/word, not just 'wrong'.

4. **Try with less help:** Remove the full written model, excessive color hints or answer-revealing pictures according to the target.

5. **Read and use:** Read aloud and apply meaning, or create a phrase/sentence when curriculum-appropriate.

6. **Final Gate:** Collect independent evidence across the book's target domains; do not play the answer immediately before an independent reading item.

7. **Return later:** Revisit on a later session and with different taught-pattern items. A same-session repeat is not delayed retention.

A trail may contain several pages with two or three stops per spread, depending on screen size and content. Do not stretch a tiny curriculum unit into mandatory filler games or compress a large unit into three clicks.

Proposed session sizing: Offer short, resumable trails, initially designed for roughly 8-12 minutes of app practice, then adjust through child usability testing and tutor planning. This is a product hypothesis, not a duration prescribed by the supplied guide. Include breaks and a finish-later option.

Speaking is required in the design, but claims must match the evidence

- Guided listening followed by repeating is practice. Reading print without the spoken model is an independent decoding attempt.

- Book 1's voice train has separate stops for am, at and mat. Later books include independent word reading and tutor-supported phrase/sentence reading.

- A recognized whole word can trigger one animation segment. Microphone volume or speaking for longer must never move the learner toward 'correct'.

- The present recognizer returns word recognition, not phoneme accuracy. Saying mango does not establish that its initial /m/ was pronounced correctly.

- Isolated sounds, unfamiliar nonwords, expressive oral reading and open comprehension answers need teacher observation unless a separately validated assessment method is added.

- No microphone, unclear audio or network failure means unassessed/retry/teacher support, not a reading failure. A tap-only alternative may complete practice but cannot silently satisfy an oral-reading requirement.

4A. Required spoken-reading and assessment specification

Mandatory learning cycle, not an optional microphone

Every book must include guided oral practice and independent reading aloud. New decodable-word instruction must follow this cycle: **Hear the sounds -> Say with Milo -> Build and blend -> Read independently -> Show meaning -> Read again later.** A trail may distribute these steps across several stops or sessions; it does not need to repeat every step for every already-familiar word. Later phrase and sentence work adapts the same model/support/independent structure.

Speaking is part of the core learning design, not a bonus after finishing a click or drag game. Both guided speech and independent reading contribute evidence, but they demonstrate different things. Hearing a word and successfully repeating it is a valid guided oral-practice result. It must not be counted as proof that the child decoded the printed word independently.

This requirement extends the book descriptions in Section 5 and takes precedence over any interpretation that their speaking tasks are optional. It does not replace tutor-administered ARAL check-ins or establish an official ARAL scoring rule.

Required step	Instruction and learner action	Evidence and limits
1. Hear the sounds	Reviewed recordings model the target sounds with synchronized letter highlighting, followed by blending and the whole word	Model delivered; no reading-success score merely for listening
2. Say with Milo	Learner rehearses the sounds and repeats the whole word after the model	Guided oral practice; current ASR may recognize the whole word, but isolated phoneme quality needs observation or a validated method
3. Build and blend	Learner moves distinct tiles, joins the sounds and says the resulting word; later builds from dictation without a printed answer	Construction result plus a separate supported spoken response; copying is not independent encoding
4. Read independently	Present print without the target's spoken model, automatic sound cues or answer-revealing picture; learner reads aloud	Independent oral word-reading attempt, with recognition method and uncertainty recorded
5. Show meaning	Read and choose, place, draw or explain the meaning, as appropriate for the word/text	Structured choices can be system-scored; open explanations/drawings need tutor review; oral recognition alone does not prove comprehension
6. Read again later	Revisit in a later session among other taught words; include reviewed new combinations of taught patterns when appropriate	Separate retrieval/transfer evidence; an immediate retry is not delayed retention

For words such as am and at, demonstrate meaning through a tutor-modeled context rather than an ambiguous single picture. Contexts containing untaught words are supported oral examples, not independent decoding items. Sight/support words have their own explicit teaching routine; do not force irregular words into an inaccurate sound-by-sound explanation.

Sound modeling and response rules

Use reviewed phoneme and word recordings as the instructional reference. Sustained sounds can be stretched appropriately; stop sounds remain short. For example, model /t/ rather than adding 'uh' and teaching 'tuh' as the sound to blend. Distinct consonant/vowel tiles and motion should explain the sound sequence, not merely decorate an already-spoken word. Do not assume general TTS correctly generates isolated phonemes.

Record only after the model finishes and playback stops. Give a clear recording cue, allow time to respond, and prevent the application's own audio from being accepted as a child's answer. Keep narration and background audio quiet during listening and recording. Validate reviewed models and recognition with the target learner population; do not impose an arbitrary accent preference.

The present recognizer recognizes a whole target word. It does not establish exact phoneme accuracy, oral fluency, or language understanding. Never invent corrective statements such as 'your /a/ was wrong' from a whole-word mismatch alone. A mismatch is a response requiring checking, not automatically a confirmed pronunciation error.

Required speaking tasks and game reactions by book

The following is mandatory design coverage for each book, in addition to its existing game plan. Every book must provide an independent attempt, a support route and a later revisit. Example words remain subject to the source/prerequisite review described elsewhere in this document.

Book	Required spoken task	Game response and assessment route
1 First Gate	Model and rehearse m/a/t; build and say am, at, mat; later read each from print without the model	A recognized whole word moves the train one segment. Save guided and independent turns separately; tutor observes isolated sounds
2 Lantern Lane	Rehearse new sounds and cumulative blends; independently read contrasted taught words such as set/sit	One lantern lights per recognized response. Contrast practice and independent reading are separate; a mismatch does not diagnose a vowel error
3 Word Market	Say a built word, then read a printed order independently, such as pen or hat	Correct structured delivery scores meaning; recognized oral reading releases a parcel. Store both results, not one combined 'pronunciation' score
4 Secret Garden	Practise o/b/r in cumulative words, then independently read garden signs such as pot or rat	A recognized word opens one water channel. Later revisit checks retrieval; sound-position tasks remain a separate domain
5 Castle Drawbridge	Read built words, then a taught short phrase and source-aligned sentence with decreasing support	Word recognition can place a plank. Phrase/sentence reading is tutor-reviewed until its scoring is separately implemented and validated
6 Changing Words	Say the original word, replace one letter, then read the changed word and use it in a phrase	The door changes after the construction result; a recognized new word opens it. Independent changed-word reading occurs without a recent audio answer
7 Key Keeper	Read forged keys/words and a cumulative phrase; independently read an unfamiliar reviewed combination of taught patterns	Word recognition opens a lock. Phrase evidence is tutor-reviewed unless a validated scorer is available; maze navigation alone earns no reading result
8 Royal Library	Guided then independent phrase/sentence reading, followed by who/what/where or other source-aligned meaning tasks	Structured meaning answers restore a page. Oral sentence evidence requires tutor review for now; the answer choice cannot substitute for reading aloud

Book	Required spoken task	Game response and assessment route
9 Vowel Tower	Model and say CVC/CVCe contrasts, independently read a contrast without its audio, then read it in a sentence	A recognized word advances one lift stop. Score word recognition separately from spelling-rule choices and tutor-reviewed sentence reading
10 Crown Chamber	Guided reading of a controlled passage, independent reading of a separate reviewed text, then read a learner-constructed sentence	Scene restoration reflects explicitly scored tasks. Tutor verifies connected reading; system scores defined meaning items, not overall fluency from task completion

Phrase and sentence speech assessment is a planned capability, not a current guarantee. Until it is validated, provide a tutor-observation route with a pending state; do not silently skip oral reading or substitute a click score. Do not claim a full ten-book oral-assessment release while required domains lack a working system or tutor evidence route.

Attempt labels, progression and recovery

Result	Stored interpretation	Learner response / progression
Guided word recognized	Target repeated after a model; assisted oral practice	Celebrate and advance the practice animation; still schedule independent reading
Independent word recognized	Target recognized from print without answer assistance in this attempt	Advance one game segment and save evidence; not a phoneme-accuracy percentage or universal mastery claim
Target not recognized	Transcript did not match; cause may be learner response or recognition error	Invite another try or offer the model. Avoid a phoneme-specific diagnosis; repeated difficulty can go to tutor review
Unclear audio / service error	Unassessed, with technical reason	Keep position; retry, pause or request support. No loss of lives and no incorrect-reading score
Help used	Model or answer cue supplied during an independent attempt	Mark the resulting response assisted. Schedule a separate independent check after intervening work, not an immediate retry relabeled independent
Speaking skipped / microphone unavailable	Practice may continue; oral evidence incomplete	Offer nonvoice practice or tutor observation. Do not block all learning, but do not award an oral-reading outcome automatically
Tutor checked	Human-observed result with domain and assessor recorded	Use the documented result according to the approved gate rule; access permission alone remains insufficient

Each recognized spoken response may trigger one short animation: train movement, a lantern, a delivery, a bridge plank or a door. Speech duration, volume, repeated button presses or a merely completed recording must never substitute for response evidence. Offer a reduced-motion equivalent.

At the Final Gate, read general instructions aloud if needed, but not the target word/text or its answer. The learner can request help; doing so changes the attempt's support status rather than being punished. Include different reviewed taught-pattern words where possible to reduce reliance on memorized training items. For Book 1's small inventory, acknowledge the limits of transfer evidence rather than introducing untaught letters to manufacture novelty.

Minimum data and release acceptance tests

Add these fields to the activity/attempt contract: target content/version; expected response; response mode; prompt phase; model-played/help-used flags; guided versus independent status; transcript where applicable; recognition or tutor decision; uncertainty/error reason; meaning-task result; game event; timestamp and later-review linkage. Retain recordings only under the project's consent and data-retention rules.

Before releasing each book, verify the following:

1. Every new decodable-word teaching set maps to all six steps, with no speaking task hidden as an optional extra.

2. Guided repetition is recorded and rewarded as practice, never counted in the independent-reading numerator.

3. Independent items do not autoplay their answer; using replay/help changes the evidence classification.

4. Audio playback cannot be captured as a learner response; quiet/unclear speech and simulated service failure remain unassessed.

5. Recognized responses trigger only the intended movement once; retries do not duplicate progress or rewards.

6. Phrase/sentence outcomes have a working tutor route or separately validated scoring, rather than reusing isolated-word success as a proxy.

7. Each book has a saved independent-reading opportunity and a scheduled later revisit. Device failure or skipping preserves access to practice but leaves the relevant oral evidence incomplete.

8. The tutor dashboard separates guided speech, independent word recognition, oral observations and comprehension results; it never labels these collectively as a computed pronunciation percentage.

These are proposed product acceptance requirements. The group must still approve item counts, educator-scored rubrics, gate thresholds and the research evaluation protocol. System-assessed reading is central, but the claim must remain limited to the response actually measured.

Philippine teaching-resource basis

The DepEd-hosted SDO Dipolog ARAL resource collection lists letter tiles, sound boxes, phonics picture cards, phoneme demonstrations, word dice, sound-isolation movement activities, bingo and decodable readers. These provide a relevant local basis for varied sound-to-print practice. Availability of materials is not evidence that every teacher uses the same technique or that Readlr has been approved. SDO Dipolog ARAL resources

The proposed six-step sequence and assessment labels above are Readlr's explicit design specification, not an official named DepEd assessment framework. They preserve the distinction between learning with an oral model and independently reading print.

5. Ten-book curriculum overview

The guide's eight-week schedule remains the tutor's pacing reference. Week 1 readiness begins in Camp and teacher sessions. The later weeks contain unequal content loads, so book counts must not determine teaching time.

Book	New focus	Primary workbook coverage	Outcome / Passport title	Reused later
1 The First Gate	m, a, t; early sound awareness and blending	LAS 1-4	Join a few known sounds: Sound Starter	All later decoding and construction
2 Lantern Lane	e, s, i, l; cumulative contrasts	LAS 5-7; prepare for LAS 8	Distinguish and blend taught sounds: Sound Scout	Accurate vowel and consonant choices
3 The Word Market	p, f, h, n; words and meaning	LAS 8-14	Build/read familiar-pattern words: Word Builder	Reading to carry out instructions
4 The Secret Garden	o, b, r; cumulative vowel contrasts	LAS 15-18	Track and locate sounds: Sound Explorer	Precise substitutions and decoding
5 The Castle Drawbridge	u, d, g, c; taught sight words and phrases	LAS 19-24	Read beyond a single word: Phrase Builder	Phrase reading and sentence work
6 The Hall of Changing Words	Consolidation and sound substitution	LAS 25-28	Explain and read a changed word: Word Shaper	Flexible decoding and encoding
7 The Key Keeper	w, k, then j, x; cumulative phrases	LAS 29-36	Solve word and phrase tasks: Word Pathfinder	Broader connected reading
8 The Royal Library	v, y, z, q/qu; rhyme and meaning	LAS 37-41	Read for information: Meaning Finder	Questions, inference from simple text
9 The Vowel Tower	Explicit CVC -> CVCe / Magic E	LAS 42-44	Contrast taught spellings: Pattern Explorer	Reading and composing with new patterns
10 The Crown Chamber	Cumulative text, questions, sentence creation	LAS 45-46 plus cumulative review	Use reading to understand/create: Story Maker	Discovery Realm transfer

These titles describe the focus of evidence, not a certification of all reading abilities. Sight/support words and narrative vocabulary need explicit treatment; not every word heard in a story is an independent decoding target.

Book 1: The First Gate

Story and setting: Restore a gate by collecting three sounds in an orchard and joining them on a small train. Keep the existing mango/apple/tin anchors, picture scenes and train foundation.

Entry: Readiness orientation and tutor placement, not completion of the entire Vowel Dojo. Targets are m, short a and t; words am, at and mat. Mango/apple/tin establish sound and meaning orally, not independent decoding using only m/a/t.

Proposed trails: Meet m -> meet a -> meet t; hear/locate/count sounds; join and build am/at/mat; read and apply.

1. **Sound Orchard:** Hear a picture name, identify its initial sound, then drag the picture to a sound basket. Start without printed words when testing listening. Offer tap-then-place.

2. **Sound Stepping Stones:** Move one counter for each sound heard, then identify beginning/end. Teacher supports isolated oral responses.

3. **Letter Train:** Hear /a/ and /m/, see distinct tiles move together in sync with a blend, then hear am. Progress to building from dictation without a written answer.

4. **Speaking Stations:** Read am, at and mat separately. Each recognized target advances one discrete train segment. Unclear audio waits safely.

5. **Gate Match:** Read a word, connect it to a taught meaning where appropriate, then read without the model at the Final Gate.

Companion work: LAS 2 tracing and letter formation on paper; tutor-led source nonword items where relevant. Explain any omitted/changed nonword task rather than claiming identical coverage.

Completion evidence: Sound-symbol identification, segmentation/encoding practice, independent word reading and meaning evidence recorded separately. Teacher observation for sound production. Later revisit before claiming retained skill.

Achievement and transfer: Sound Starter passport entry; orchard/train sticker for effort. Its learned blending routine is reused in every later book. A decorative train ticket may appear in later stories, but essential support is never locked behind a cosmetic reward.

Current versus new: Orchard, train, speaking stops and sequential actions are partly implemented. Synchronized phoneme blending, valid oral-sound evidence, complete source-task coverage and reliable delayed skill records remain work.

Book 2: Lantern Lane

Story and setting: Light a lantern lane by noticing which sound has changed. Introduce e/s, then i/l, with earlier sounds reused.

Candidate decoding words: sat, met, set, sit, let, lit; content and audio checked before release. LAS 5-7 are primary; sound-location work prepares for LAS 8 in Book 3.

1. **Lantern Listening:** Hear a taught word and select it among carefully chosen alternatives. Choices appear after playback, not while instructions are being spoken.

2. **Sound Windows:** Put counters in beginning/middle/end positions, then reveal letters. Do not rely on tile colors alone.

3. **Switch the Light:** Change one letter in a known word, predict the new sound, blend and read the result.

4. **Lantern Maze:** Read a sign to choose the next route. A wrong route becomes a quiet practice alcove, never a penalty or game-over. Tap navigation replaces fine motor steering.

5. **Read the Lane:** Independently read cumulative words; compare a new taught-pattern item with familiar practice items.

Completion: Identify introduced letters/sounds and read cumulative combinations without the model. Use oral observation for sound contrasts; log assisted and independent attempts separately.

Transfer: Sound Scout supports later vowel decisions and word repair. Tutor Check-in 1 is placed after the corresponding Week 3 content, not automatically after an arbitrary number of clicks. The supplied first check-in covers letter sounding, syllables, words and phrases with tutor administration.

Book 3: The Word Market

Story and setting: Help market stalls deliver the correct items. Introduce p/f, then h/n in the guide's order rather than delaying h to Book 4.

Candidate words: pin, fin, tin, pen, net, map, hen, hat. Picture names may be richer than independent decoding targets, but must be clearly modeled vocabulary.

1. **Delivery Sort:** Hear and locate a target sound using LAS 8-style positions, then sort deliveries.

2. **Packing Bench:** Build a dictated word with tiles; first guided, then without the printed model. Read the result aloud.

3. **Read the Order:** Read a label and deliver the matching object. Remove extra picture clues for the independent word-reading version.

4. **Missing Parcel Letter:** Fill a missing beginning/middle/end letter, then blend the whole word rather than guessing from the picture alone.

5. **Market Reader:** Read a short mixed set, including a word not drilled in the immediately preceding game.

Companion: Journal copying and reading for LAS 13; tutor observes formation. Copying is not labeled independent spelling.

Completion: Word construction, word-picture meaning and independent oral word reading. Word Builder unlocks later reading-directed choices, not 'reading everything in the market'.

Book 4: The Secret Garden

Story and setting: Restore garden paths using o/b, then r, with cumulative review. Introduce r here, not for the first time in Book 6.

Candidate words: pot, top, hop, hot, sob, bin, rat, rim. Choose age-appropriate meanings and reviewed sound models.

1. **Seed Sounds:** Identify picture initial sounds, then compare familiar middle vowel sounds in spoken words.

2. **Garden Channels:** Read a target word to open a water channel to the correct plant. Animation illustrates the result; route choice requires reading.

3. **Word Flower:** Place a missing letter, blend and read. Flower growth follows the literacy response, not rapid clicking.

4. **Listening Picnic:** Select a heard word in a cumulative set, then take a separate independent reading turn.

5. **Garden Trail:** Read new combinations of taught patterns and apply word meaning.

Completion: Distinguish and use the introduced sounds within cumulative words. Sound Explorer supports precise word changes in Book 6. Include partner reading, not only computer listening.

Tutor bridge: Schedule Check-in 2 at the guide's Week 6 entry, before new u/d/g/c teaching. Do not turn this check-in into an unvalidated automatic app badge.

Book 5: The Castle Drawbridge

Story and setting: Build a bridge from words, then connect them into short meaningful phrases. Introduce u/d, then g/c; explicitly teach the sight/support words assigned by the guide.

Candidate words: sun, bun, hut, mud, bug, cub, dug. Sight words must have their own teaching records; mark them separately from regular decoding words.

1. **Bridge Sound Bench:** Reuse the familiar sound-picture/model routine for new letters. Do not send a learner directly to bug before g is taught.

2. **Plank Builder:** Hear a word, encode it, blend it and independently read it on a later plank.

3. **Phrase Ferry:** Drag word tiles to form a taught short phrase, hear a model when practicing, then read the complete phrase.

4. **Read and Place:** Move a figure/object according to a short readable phrase or sentence. This is meaning evidence only when the text, not a spoken duplicate, supplies the instruction.

5. **Bridge Reader:** Read words and a source-aligned phrase/sentence with tutor observation where automatic scoring is not valid.

Completion: Word decoding plus entry-level phrase reading and understanding. Phrase Builder is reused in Books 6-10. A word-only ASR gate cannot certify this book's full outcome.

Book 6: The Hall of Changing Words

Story and setting: A bright puzzle hall changes as one sound changes. This is consolidation and flexible manipulation, not a late introduction of r/c.

Source examples: rug -> dug, cub -> tub, sad -> lad, bug -> pug, hum -> gum. All letters must already have teaching records.

1. **Sound Switch Doors:** Hear the old and new word, identify the changing position, then move the replacement letter.

2. **Word Ladder:** Follow two or three meaningful word changes. Read every intermediate result; animation alone cannot solve the ladder.

3. **Repair the Message:** Fill a missing word/letter from dictation, then reread the completed phrase.

4. **Phrase Puzzle:** Assemble a source-aligned phrase/sentence and match its meaning. Support is faded before assessment.

5. **Hall Exit:** Independently build/read a changed word and interpret a short phrase or sentence.

Completion: Locate a sound change, encode it and read the result, with phrase/sentence transfer. Word Shaper supports flexible decoding in later books. This must include oral reading, not only substitution clicks.

Book 7: The Key Keeper

Story and setting: Explore a friendly key vault with readable clues and small rooms. Introduce w/k, then j/x, before v/y.

Candidate words: web, wet, win, kid, kit, keg, jam, jet, box, fox. Explain x's relevant sound sequence instead of assuming every printed letter always equals one phoneme.

1. **Word Search Windows:** Find taught words in a small uncluttered grid, then read them; searching alone is not decoding evidence.

2. **Key Forge:** Build a heard word from shuffled tiles and read the finished key.

3. **Reading Rooms:** Choose between two readable clues to move through a small dungeon. No combat, time limit or fear-based failure.

4. **Message Keys:** Form and read two short phrases; reuse familiar phrase controls from Book 5.

5. **Key Keeper's Check:** Independent cumulative word reading, construction and phrase work.

Completion: Apply a broader sound set without abandoning earlier skills. Word Pathfinder prepares learners for connected meaning. Place Tutor Check-in 3 after the guide's j/x review and before v/y, corresponding to Week 7 Day 4.

Book 8: The Royal Library

Story and setting: Restore meaning to illustrated library pages. Introduce v/y, then z/q with appropriate qu examples. Do not treat q as a standalone English sound independent of its taught spelling context.

Candidate words: van, vet, yam, yet, zip; teacher-reviewed q/qu examples from the source. More complex vocabulary is explicitly supported, not silently classified as cumulative CVC.

1. **Rhyme Shelves:** Hear/read a source word, find or generate a rhyme. Keep oral rhyme work distinct from visual spelling matching.

2. **Picture Clue Puzzle:** Use a small picture set to establish meaning, then build and read its taught word. A four-pictures-one-word variant is guided vocabulary play, not independent decoding assessment.

3. **Sentence Scenes:** Read a short sentence and move objects to show who/what/where; remove spoken duplication when evaluating reading comprehension.

4. **True or Not?:** Judge a source-aligned sentence against its meaning and identify the supporting word/picture detail.

5. **Draw the Phrase:** Read a phrase, draw or arrange the scene, then explain it to a partner/tutor; preserves LAS 41 rather than skipping it.

Completion: Rhyming evidence, phrase/sentence reading and literal meaning questions. Meaning Finder supplies the comprehension routine for Books 9-10 and later adventures. Current isolated-word recognition is insufficient for this gate.

Book 9: The Vowel Tower

Story and setting: Move between bright tower rooms where adding e changes a taught word. Connect this directly to the Vowel Dojo's new Magic E practice.

Source patterns: cap/cape, pet/Pete, kit/kite, pop/pope, cub/cube. Teach Pete as a name. Choose modeled examples and meanings carefully; additional pairs require prerequisite checks. The supplied guide includes long e in Pete. The separate ee pattern in tree/seed/feet must be an explicitly taught extension, not passed off as Magic E coverage.

1. **Magic E Lift:** Read the CVC word, add e, watch the vowel highlight change, hear the new pattern, then read the resulting word.

2. **Two Rooms:** Sort taught short/long pattern contrasts after listening; independent reading later removes the audio answer.

3. **Change and Explain:** Remove/add e, predict and read. Avoid teaching that this spelling rule has no exceptions.

4. **Sentence Windows:** Use LAS 42-style sentence-picture meaning tasks and LAS 44-style phrase-to-sentence completion.

5. **Tower Reader:** Read taught-pattern contrasts and a new reviewed combination, then use the word in connected meaning.

Completion: Distinguish, decode and apply introduced CVCe patterns. Pattern Explorer is functional preparation for richer texts, not a badge for 'all English long vowels'. Tutor-supported source passages retain explicit instruction for irregular/support vocabulary.

Book 10: The Crown Chamber

Story and setting: Restore the final story by reading, understanding and creating it. This is not a replay of eight isolated CVC words.

1. **Lost Page Trail:** Read short, controlled text in manageable segments. A guided version models reading; the independent version does not.

2. **Story Sequence:** Order events from the text and explain an order choice. Illustrations support meaning without replacing the need to read.

3. **Evidence Hunt:** Answer who/what/where and appropriate simple meaning questions; point to the relevant part of the sentence.

4. **Make a Page:** Construct a sentence with the supplied word set, read it and illustrate it. Tutor checks meaning and independently produced writing where applicable.

5. **Crown Reading:** Complete a cumulative teacher-supported sample covering relevant sounds, words, phrases, sentences and questions. Use the supplied optional end-cycle check-in separately when the tutor chooses it.

Completion: A domain-by-domain record of reading and meaning, not a single animation-completion percentage. Story Maker marks this evaluated set of skills; it does not certify grade-level fluency or independent reading of arbitrary books.

Transfer: Discovery Realm can reuse reading to follow instructions, solve new word puzzles, read new controlled stories and create messages. The core KS1 phrase/sentence/comprehension work must already be in Books 5-10; it cannot be postponed to a future realm.

6. Complete workbook coverage ledger

This accounts for **all 46 LAS identifiers** in the proposed design. It is a coverage plan, not an implemented-content count. Each individual workbook item still needs transcription, prerequisite review, audio/meaning review and test cases. If an item contains an untaught spelling or a support word, record how it is modeled or tutor-supported rather than silently excluding it.

LAS	Learning demand	Primary owner / implementation mode
1	Beginning sound from spoken word	Book 1 orchard, oral-first
2	Letter tracing / formation	Book 1 + tutor/paper; optional guided trace, no automatic handwriting claim
3-4	Heard words/nonwords	Book 1 listening; tutor-led nonword reading where required
5	Identify spoken word in a grid	Book 2 lantern choices
6	Form and read words	Book 2 tile construction + speaking
7	Missing-letter dictation	Book 2 encoding
8	Beginning/middle/end sound location	Book 3 primary; Book 2 prepares the routine
9	Select heard word	Book 3 listening
10	Read aloud and match picture	Book 3 deliveries
11-12	Missing-letter dictation, spoken/read word selection	Book 3 packing and reading
13	Journal copying and oral reading	Book 3 tutor/paper companion
14	Word-picture matching	Book 3 market meaning
15	Picture initial sound o/b	Book 4 seed sounds
16	Listen/read with partner	Book 4 shared reading
17-18	Select heard word	Book 4 listening with later independent reading
19	Word recognition	Book 5 bridge words
20	Partner phrase reading and heard phrase	Book 5 phrase ferry + partner
21	Words, phrases, sentences	Book 5 connected reading + tutor
22	Picture missing letter	Book 5 encoding
23	Phrase/sentence reading	Book 5 connected reading
24	Picture missing letters	Book 5 encoding
25	Spoken word selection	Book 6 review

LAS	Learning demand	Primary owner / implementation mode
26	Initial-letter substitutions	Book 6 word ladders
27	Generate words from cumulative letters	Book 6 construction; meaning/validity checked
28	Phrases/sentences	Book 6 message reading
29	w/k word search	Book 7 word windows
30	Initial-letter dictation and reading	Book 7 forge
31	Rearrange letters from dictation and read	Book 7 forge, model removed
32	Select heard words and partner reading	Book 7 listening + partner
33	Form and read two phrases	Book 7 message keys
34	Find words containing a letter	Book 7 letter-position search
35	Picture missing letters	Book 7 construction
36	Generate ten CVC words with reusable letters	Book 7 cumulative word maker, split into resumable batches
37	Rhyming generation	Book 8 rhyme shelves, tutor for open oral response
38	Read sentences; who/what/where questions	Book 8 sentence scenes
39	Sentence true/false	Book 8 meaning tasks
40	Partner word reading	Book 8 shared library reading
41	Read phrases and draw	Book 8 paper/digital scene companion
42	Sentence-picture true/false	Book 9 sentence windows
43	Later word reading	Book 9 Magic E practice
44	Complete phrases into sentences	Book 9 construction + tutor validation
45	Sentence reading and questions	Book 10 evidence hunt
46	Create sentences from words	Book 10 make a page, tutor-supported

The Tutor's Guide also includes readiness, oral instruction, stories, sight words, reviews, home/partner support and check-ins that are not exhausted by this LAS list. These require their own curriculum records. A 46/46 worksheet mapping alone is not proof of complete KS1 delivery.

7. Progress, achievements and access

Keep four things separate

Record	Meaning	Must not imply
Access grant	Tutor allows a book/activity to open	Learner has mastered the prerequisites
Practice participation	Learner explored/completed an activity, possibly with help	Independent correct reading
Skill evidence	Response on a specified target, with support and assessment method recorded	General mastery beyond that target
Cosmetic reward	Effort, persistence, discovery or celebration	A validated learning score

Suggested learner progress labels: **Ready to explore**, **Practising**, **Tried independently**, **Tutor checked**, and **Revisited later**. Do not describe every successful API transcript as 'mastered'.

Proposed gate policy: Required domains must have independent evidence or a documented tutor decision. Existing 80% word gates are provisional product rules, not ARAL standards; three successful words cannot stand in for every domain in a book. Select item counts and decision thresholds with the educators before the pilot. A child's mixed results should create a targeted support route, not a forced replay of the whole book.

Future use of achievements: Skills determine recommended tasks and opportunities to apply learning, not fictional abilities that replace instruction. Cosmetic keys, lanterns, bridge pieces and book seals can carry the story forward. Essential narration, accessibility and learning help remain available to everyone.

Teacher preview: An educator/admin may open every book for planning. Store the access decision and reason separately. Preview mode must not create learner attempts, reward earnings, passport outcomes or research completion records.

8. Game and interaction rules across all books

Use a small reusable mechanic family with increasingly rich literacy demands, not ten unrelated control schemes.

Mechanic	Good use	Invalid shortcut to avoid
Drag and sort	Match sound, spelling or meaning	Sorting entirely by color without reading
Tile building	Encode a heard word; later read it	Calling model-visible copying independent spelling
Merge animation	Show phonemes joining with synchronized audio	Sliding letters after only a whole-word recording
Maze / dungeon	Read a clue to choose a route	Measuring reading through dexterity, speed or random routes
Voice travel	One recognized word advances one segment	Moving on loudness, duration, or claiming continuous phoneme tracking
Picture puzzle	Introduce vocabulary and connect words to meaning	Treating a picture guess as independent decoding
Sentence scene	Read and represent meaning	Narrating the exact answer during a reading assessment
Story creation	Build/read/explain a meaningful sentence	Automatically marking any grammatical-looking sequence correct

One primary action at a time

- Guided blend: **Hear sounds -> Join sounds -> Read the word -> Next**. Relevant replay/help stays secondary and accessible.

- Guided sound lesson: **Listen -> Find -> Say -> Finish**. Do not display competing 'listen' and 'continue' decisions before the learner has heard the model.

- Independent reading: **Read aloud -> processing -> result/retry/support**. Do not require listening to the answer first.

- Dragged pieces visibly relocate, leaving a deliberate placeholder only when it explains an empty slot. No duplicate 'husk' that looks like an unperformed move. Undo returns the same piece.

- Animation has instructional meaning: phoneme highlighting, joining, placement, route completion. Avoid long compulsory transitions and nested zoom/page-turn effects.

- Maps sit inside paper margins with brief readable story text. Their routes and unlock state use one coordinate/progression model. The available path reaches the next eligible stop; locked routes remain inviting but clearly unavailable.

- Page turns keep cover dimensions stable and must not create transient body scrollbars. Respect reduced motion, keyboard focus and touch targets.

- Bright foreground tiles and readable text must remain distinct from lively scenery. Background motion pauses or reduces during listening/recording.

- Loading uses real readiness where measurable; otherwise show an honest preparing state, not fabricated download percentages or an unnecessarily long wait.

9. Refactor the data model, not only the screens

Use a versioned curriculum catalog shared by Camp, books, library, progress and tutor tools.

Entity	Required information
Curriculum source	Document/version, week/day or LAS, source location, adaptation note
Skill	Language, domain, target pattern, prerequisite skills, expected demonstration
Content item	Target word/text, phonemes/graphemes as appropriate, meaning, taught/sight/support classification, reviewed audio IDs
Activity	Book/trail, mechanic, teaching phase, targets, support level, accessible alternative
Attempt	Learner, content version, response, assistance, result, assessment method, uncertainty/network state, timestamp
Evidence decision	Domain, contributing attempts, tutor judgment if any, decision rule/version, later-review status
Access grant	Who authorized, reason, scope, timestamp; never stored as mastery
Reward	Participation or cosmetic condition; separate from evidence decision
Tutor check-in	Source instrument, administration date, domain results, assessor, notes; not invented ASR scores

Persist trail position and activity completion so returning from Camp or refreshing resumes appropriately. Track updates across devices/accounts without relying solely on in-memory visited markers. Preserve legacy progress under its original curriculum version instead of converting old vowel-stage completion into new book mastery.

Protect child recordings and research data: document guardian/school consent, retention, restricted tutor access, deletion and the handling of failed uploads. Collect only what the agreed evaluation requires. These are implementation requirements to review, not claims that all governance controls already exist.

Current implementation boundary

Area	Current foundation	Required refactor
Book 1	Orchard, tile train, am/at/mat speaking, stepwise action controls	Full source coverage, synchronized sound models, faded scaffolds, skill evidence and delayed revisit
Books 2-10	Book/map presentation and generic task banks	Correct sequence and distinct target-driven trails described above
Sound introductions	Existing catalog	Move h to Book 3, r to Book 4, c to Book 5; j/x before v/y; include q/qu appropriately
Magic E	Long-vowel material and words present	Explicit CVCe teaching including Pete; separate ee extension
Speech	Whole-word recognition with uncertainty handling	Honest labels, child-speech validation, teacher assessment for unsupported domains
Checkpoints	Mostly isolated word tasks	Domain-specific evidence, phrases/sentences/meaning where required
Camp/library/progress	Shared content integration partly present	One canonical catalog and consistent evidence summaries
Rewards	Sticker/progress foundations	Separate effort from skill; optional preset Milo customization
Tutor access	Access-control foundation	Verify grants apply immediately and never overwrite mastery; preview isolation

Relevant code to refactor includes chronicleLessons.ts, ReadingJourney.tsx, ChronicleBlendLesson.tsx, SoundLearningCamp.tsx, FirstGateGames.tsx, and backend cvcRecognition.ts. Source behavior must be checked again when implementation begins; this document is not a migration patch.

10. What changes from the proposal

Original direction	Revised direction	Why / research consequence
Vowels -> CV blending -> CVC as three broad stages	Ten cumulative units; those skills recur throughout	Follow supplied sequence and avoid an extended repetitive vowel prerequisite
Filipino curriculum / Marungko language framing	Supplied English KS1 track; describe Marungko relationship precisely	Language scope, consent materials and test instruments must agree
Primarily vowel/CV/CVC pronunciation practice	Sounds, encoding, words, phrases, sentences and comprehension	Needed for supplied full KS1 coverage; materially expands scope
Voice recognition as pronunciation performance	Word recognition as one signal; independent teacher ratings for pronunciation/reading	Prevent unsupported phoneme accuracy and efficacy claims
Stage completion as broad learning indicator	Participation, access and domain evidence separated	Avoid counting skips, overrides and guided copying as mastery
Repeated training interactions	Familiar controls with different cumulative literacy demands	Respond to repetition feedback without excessive new UI burden
Reward milestones as engagement	Cosmetic participation plus measured learning evidence	Rewards alone cannot establish learning or voluntary engagement
Four-week evaluation of original scope	Four-week defined subset OR approved amendment for broader exposure	Do not compress the eight-week guide merely to finish ten books

Proposed replacement general objective

To design and evaluate Readlr as a gamified English KS1 reading companion that translates the supplied ARAL instructional sequence into cumulative, accessible, tutor-supported activities, and to examine its usability, speech-recognition reliability and independently assessed reading outcomes among the intended Grade 1 participants.

Proposed specific objectives

1. Map the supplied readiness, sound-symbol, blending, encoding, word, phrase, sentence and comprehension work into ten curriculum units and reusable Camp activities, with traceable digital or tutor-supported delivery.

2. Implement scaffolded games that progress from modeling to independent application, use speech meaningfully, and preserve one-action-at-a-time navigation and motor-accessible alternatives.

3. Record assistance, uncertainty, independent evidence and delayed practice separately from rewards and access decisions.

4. Evaluate target-child usability and recognition reliability under documented classroom connectivity/audio conditions.

5. Evaluate reading outcomes with educator-administered measures aligned to the taught curriculum and the approved research design, rather than treating software completion as efficacy.

These replace or expand proposal wording only after the group's adviser/research approval. They do not silently amend an approved study protocol.

11. SMART goals: acceptance criteria versus research hypotheses

None of the supplied validation highlights proves that the original numerical learning targets have already been met.

Proposed product acceptance goals

The milestones below are time bounds within the delivery process; the group must assign calendar dates before formally adopting them as SMART commitments.

Goal	Specific measure	Deadline / evidence
Complete curriculum traceability	46/46 LAS assigned; every tutor-guide lesson/domain recorded as digital, hybrid or tutor-led; no unexplained omission	Before ten-book content freeze; signed coverage review
Enforce taught-content prerequisites	Every independent target passes prerequisite validation; explicit exception records for sight/support words	Before each book release; catalog test report
Honest learning evidence	All required activities record assistance and assessment method; all access grants remain separate from mastery	Before pilot; integration tests plus educator walkthrough
Scaffold every target	Each required skill has modeling, guided practice, independent application and a scheduled later revisit	Before pilot; skill coverage matrix
Accessible interaction	Every drag task has tap/keyboard equivalent; reduced motion; no competing mandatory primary actions	Before child usability round; desktop/mobile task checks
Reliable spoken flow	Unclear/failed audio never creates a wrong-reading score or a false completion; record latency and recovery	Before pilot; fault-injection and classroom checks
Content review	Record educator review of every required sound model, word bank, instruction and checkpoint	Before content release; review log, not presumed approval

Original numerical targets: retain as hypotheses or revise explicitly

Proposal target	Required clarification / decision
>=80% CVC pronunciation; >=85% ASR recognition	Two separate endpoints: educator-rated pronunciation/reading versus held-out recognition performance. Define units and denominators; report false acceptance, false rejection and unclear rate
>=75% stage completion	Replace old stage denominator with assigned curriculum-unit completion over the evaluation period. Exclude preview and teacher access grants; report assisted/skipped tasks
>=80% of learners improve decoding	Define minimum meaningful improvement using parallel educator-scored forms, not any one-point fluctuation
>=75% corrected pronunciation on a second attempt	Link attempt pairs and separate genuine instructional correction from ASR variability or device retry
>=30% pronunciation improvement; >=25% phonemic-awareness gain	Keep as unproven hypotheses pending instrument/rubric review; define percent versus percentage-point change and zero baselines
>=25% WCPM gain; >=30% error reduction	Requires comparable connected-text teacher assessments, not isolated word-game timing. Assess floor effects for emergent readers
>=75% weekly retention; >=60% voluntary-use consistency	Define cohort/week, availability and voluntary use outside scheduled sessions; do not penalize lack of home access
>=70% daily rewards versus >=70% total milestones	Choose the intended endpoint; these are different measures and neither proves reading improvement
<=2-second feedback versus <=3-second voice action	Define separate timing events or choose one requirement; measure recording-end to displayed result and report p50/p95 under specified network conditions
>=70% fewer unanswered/unrecognized/abandoned interactions	Separate silence, recognition failure, intentional skip and abandonment; specify comparison baseline
Five IT experts and three educators	Planned review sample, not evidence of completed review; preserve instruments and actual evaluation records

Study scope decision: The proposal describes 60 Grade 1 participants, experimental/control groups and four weeks. Option A preserves four weeks and evaluates an explicitly assigned curriculum subset with documented exposure. Option B evaluates the broader sequence with a formally amended duration/protocol. Do not require ten-book completion or claim full-course effects under Option A.

Record attrition, exposure, school/device conditions and group comparability. Quasi-experimental findings need appropriately qualified interpretation. Keep classroom timed assessment separate from untimed, nonpunitive games.

12. MVP and expert-feedback response

Evidence / feedback	Design response	How to verify
Stage 1 repetition	Camp is revisitable support, not a prolonged compulsory first stage; books vary literacy demands	Observe repeated sessions, not only first-session excitement
Weak imagery / incomplete Milo	Preserve full-body companion, lively storybook scenes, distinct book settings	Child comprehension of affordances and visual distraction checks
Underused audio	Synchronized sound models, word reading, phrase/partner turns and meaning discussion	Count meaningful oral opportunities and independent attempts
Robotic fallback voice	Review/preload essential recordings; evaluate fallback voice; phoneme models need reviewed assets	Audio review and missing-asset tests, then child testing
Noise / unstable internet	Preflight device/connectivity; headphones; safe unassessed recovery	Test representative classroom noise/network conditions
Customization requests	Proposed preset Milo colors/accessories and sticker rewards	Confirm children understand effort rewards without mastery confusion
Low-supervision navigation and peer collaboration worked	Sequential actions, persistent return point, partner-reading tasks	Observe adult prompts, peer roles and successful re-entry

The supplied MVP document includes informal teacher/facilitator feedback. It does not include a completed formal expert rubric. Treat the expert-review checklist as **pending**: sound accuracy, task prerequisites, cognitive load, decoding versus guessing, assessment validity, language appropriateness, accessibility and workload. Do not claim that unprovided expert recommendations were fulfilled.

13. Implementation and group decision plan

Phase A: agree on the curriculum contract

- Approve English-track scope, the terminology and ten-book adaptation.

- Transcribe the full tutor/workbook sequence into the versioned catalog, including sight words, oral/tutor tasks and source exceptions.

- Resolve the four-week study versus whole-course delivery decision with the adviser.

- Review independent evidence rules and select educator-approved item sets/thresholds.

Phase B: make Book 1 the reference implementation

- Complete modeled sound blending, oral awareness tasks, faded tile support and evidence records.

- Verify source coverage, including formation and nonword/tutor tasks.

- Test drag/tap behavior, sequential buttons, microphone uncertainty, resume and delayed revisit.

- Observe Grade 1 use before declaring this the template for nine more books.

Phase C: expand by instructional demand

- Books 2-4: cumulative sound/word mechanics and check-in scheduling.

- Books 5-6: phrase/sentence support, word transformation, independent evidence beyond words.

- Books 7-8: remaining sound groups, controlled searches/mazes, rhyme and comprehension.

- Books 9-10: explicit Magic E, connected text, creation and cumulative transfer.

- Reuse tested mechanics, not unreviewed copied word banks. Each release requires content, accessibility and evidence review.

Phase D: evaluate and amend claims

- Conduct planned IT/educator reviews and document findings.

- Run a target-child usability round under realistic conditions.

- Execute the approved study with predeclared outcomes; report unmet targets as well as successes.

Suggested ownership: curriculum/content lead, game/UI lead, data/backend lead, assessment/research lead, and QA/accessibility lead. One person may fill several roles, but each deliverable needs an owner and a reviewer.

Definition of ready for pilot

Curriculum traced; audio reviewed; tasks prerequisite-safe; independent evidence separated from assistance; tutor overrides isolated; required hybrid work specified; failed speech handled safely; progress survives re-entry; responsive interaction tested; consent/data arrangements documented; study instruments and exposure plan approved. Attractive maps and passing software tests are necessary supporting work, not proof of effective reading instruction.

14. One-minute explanation for the group

Readlr is changing from three separate training stages into ten connected English reading units based on the supplied ARAL KS1 materials. Learning Camp remains the practice home for vowels, consonants, blending and later word/story work. Children learn sounds and words cumulatively inside the books, then progress to phrases, sentences and comprehension. Each game must teach or demonstrate a reading skill; stickers reward effort, while the Reading Passport records evidence. Book 1 supplies the interaction foundation, but its content and evidence still need refinement before expansion. The full ten-book plan is proposed, and learning effectiveness must be evaluated rather than inferred from game completion.

This blueprint paraphrases the curriculum for planning; it does not reproduce the workbook or replace the tutor's materials. All proposed games, skill titles, interface names and ten-book divisions are Readlr design decisions unless explicitly identified as source content.
